## DETAILED ACTION

### *Allowable Subject Matter*

Claims 1-23 are allowed.

The following is an examiner's statement of reasons for allowance:

Peer, US Patent No. 5,577,196 discloses a method and system called intelligent digital signal hitless protection switch. Schroeder et al., US Patent No. 6,341,129 discloses data input is segmented into one or more sub-segments. Both Peer and Schroeder et al. do not teach or fairly suggest the following features, which are recited in the independent claims 1 and 11-12 of the present application:

A method for routing signals in a switch of a telecommunications network comprising the steps of:

- (a) receiving an incoming signal at the switch;
- (b) slicing data in the received incoming signal into a plurality of sub-signals, wherein the plurality of sub-signals are processed in parallel by, for each sub-signal:
  - (i) dividing the sub-signal into one or more subsets of data;
  - (ii) applying a checksum function to each subset of data to generate a checkbit for the subset;
  - (iii) adding the checkbit for each subset to the sub-signal to generate an augmented sub-signal;
  - (iv) routing at least two copies of the augmented sub-signal in parallel through redundant portions of a distributed switch fabric of the switch to generate at least two routed sub-signals for the sub-signal, wherein the distributed switch fabric has multiple

switch components adapted to route different portions of each of a plurality of incoming signals in parallel.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
